Preliminary Research Into CPG Retail Analytics Tools Outside Native Power BI Functionality

Lukas Taylor

Research Areas And Tools To Solve them

All Results Can Still Be Shown Alongside Traditional Dashboards

1. *Estimating Demand*
    a. *Problem: Estimating demand and what impacts demand*
    b. *Tool: OLS Regression*
        i. *Python: statsmodels*
2. *Price Analysis*
    a. *Problem: Targeting discounts, deciding who needs discounts*
    b. *Tool: Elasticity Modelling*
        i. *Python: statsmodels*
3. *Valuing Market Communications*
    a. *Problem: How should I invest marcomm spending?*
    b. *Tool: OLS Regression using PDL*
        i. *Python: statsmodels*
4. *Forecasting Future Demand*
    a. *Problem: How can future demand best be predicted?*
    b. *Tool: Autoregression and/or ARIMA*
        i. *Python: Pandas, statsmodels*
5. *Targeting The Right Customers*
    a. *Problem: Who should my strategies target?*
    b. *Tool: Logistic Regression*
        i. *Python: Sklearn*
6. *Maximizing Mailing Impact*
    a. *Problem: Who should I e-mail for best results?*
    b. *Tool: Logistic Regression and Lift/Gain Charts*
        i. *Python: Sklearn*
7. *Product Bundling Analysis*
    a. *Problem: What products should be bundled?*
    b. *Tool: Logistic Regression and Predictive Market Basket Analysis*
        i. *Python: Sklearn*
8. *Estimating Time Of Purchase*
    a. *Problem: When are my customers most likely to buy?*
    b. *Tool: Survival Analysis*
        i. *Python: Sklearn*
9. *Increasing Customer Lifetime Value*
    a. *Problem: How do I assess and increase customer lifetime value?*
    b. *Tool: Survival and Tobit Analysis*
        i. *Python: Sklearn*

        ii. *R: Tobit*

10. *Modelling Transactions*
    a. *Problem: How to explain number of transactions and purchases?*
    b. *Tool: Poisson Regression*
        i. *Python: Sklearn*
11. *Quantifying Complexity Of Customer Behavior*
    a. *Problem: How does factors like price affect different brands or products?*
    b. *Tool: Simultaneous Equations*
        i. *Python: Sympy*
12. *Designing Effective Loyalty Programs*
    a. *Problem: How can I design programs to increase loyalty?*
    b. *Tool: Loyalty Design and Survival Modelling For Earn-Burn*
        i. *Python: Sklearn*
13. *Identifying Loyal Customers*
    a. *Problem: How do I quantify loyalty and how can I identify types of loyalty?*
    b. *Tool: Structural Equation Modelling*
        i. *Python: Semopy*
14. *Segmentation*
    a. *Problem: What analytics are really needed and how can they be used to better understand my customer market?*
    b. *Tool: Hierarchical Clustering, K-Means Clustering, Latent Class Analysis*
        i. *Python: Scipy, Sklearn*
        ii. *R: Latent Class Analysis*
